Project Name	Import Data using Transform Maps (Spreadsheet)
Team Size	4
Team Leader	SRIKAVI T

Customer Problem Statement

The team needs to understand the challenges faced when importing spreadsheet data into ServiceNow and mapping the spreadsheet fields correctly to the target table.

PS-1

I am (Customer): a ServiceNow user who needs to import spreadsheet data.

I'm trying to: import spreadsheet records into the correct ServiceNow table using Transform Maps.

But: the spreadsheet fields may not match the target table fields directly.

Because: the data needs proper field mapping and transformation before it can be imported correctly.

Which makes me feel: concerned that the imported records may be incomplete or incorrect.

PS-2

I am (Customer): a ServiceNow user working with spreadsheet data.

I'm trying to: transfer spreadsheet records accurately into ServiceNow.

But: incorrect mapping or inconsistent spreadsheet data can cause import problems.

Because: Transform Maps require the source fields to be mapped appropriately to the target fields.

Which makes me feel: uncertain about whether all records have been imported accurately.
