Project Design Phase
Proposed Solution Template

Date	15 February 2025
Team ID	SWTID-2026-8331
Project Name	Team Enrollment Confirmation – Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Team Details

S.No.	Role	Name
1	Team Leader	SRIKAVI T
2	Team Member	ISWARYA S
3	Team Member	YOGASRI S
4	Team Member	KEERTHIKA L

Proposed Solution

S.No.	Parameter	Description
1.	**Problem Statement (Problem to be solved)**	Organisations that manage team enrolments (students, project teams, employees) receive participant data in spreadsheets. Entering this data manually into the ServiceNow platform is slow, repetitive and error-prone. Typical issues include: • Duplicate or inconsistent records for the same team or member. • Spreadsheet column names that do not match the fields in ServiceNow tables. • Delays in confirming enrolment because records must be keyed in one by one. • No easy way to verify how many records were loaded, updated or rejected.
2.	**Idea / Solution description**	Use ServiceNow's Import Set and Transform Map capabilities to load team enrolment data directly from a spreadsheet (Excel/CSV) into a target table, and confirm enrolment automatically. • **Step 1:** Create a custom table (e.g. Team Enrollment) with fields such as Team ID, Team Size, Team Leader and Team Members. • **Step 2:** Upload the spreadsheet as a data source, which loads rows into a staging (Import Set) table. • **Step 3:** Build a Transform Map that maps each spreadsheet column to the matching target field, with

S.No.	Parameter	Description
		a coalesce on Team ID to avoid duplicates. • **Step 4:** Add field maps, scripts or transform rules to clean and validate the data (e.g. trimming text, mandatory checks). • **Step 5:** Run the transform, review the Transform History for inserted, updated and skipped records, and confirm enrolment. Team SWTID-2026-8331 (4 members: Srikavi T, Iswarya S, Yogasri S, Keerthika L) will use its own enrolment details as the sample data set.
3.	**Novelty / Uniqueness**	• Fully no-code/low-code import using native ServiceNow features; no external ETL tool is needed. • Coalesce logic ensures repeated uploads update existing records instead of creating duplicates. • Built-in transform history and error logging give clear traceability of every import. • The same map can be reused for any future spreadsheet with the same format, saving repeated effort.
4.	**Social Impact / Customer Satisfaction**	• Reduces manual data entry, saving time for administrators and coordinators. • Improves data accuracy, so teams receive correct and timely enrolment confirmation. • Faster onboarding leads to higher satisfaction for participants and organisers. • Promotes digital, paperless record-keeping and builds practical ServiceNow skills among students.
5.	**Business Model (Revenue Model)**	• **Service model:** Offer data-import and migration setup as a one-time implementation service for institutions and companies. • **Subscription / support:** Charge a recurring fee for maintenance, new transform maps and support. • **Training:** Provide paid workshops on Import Sets and Transform Maps. • **Add-ons:** Premium extras such as automated email confirmations, dashboards and scheduled imports.
6.	**Scalability of the Solution**	• Handles small files or thousands of rows using the same Import Set and Transform Map process. • Extends to other tables and use cases (users, assets, incidents, inventory) by creating additional maps. • Scheduled imports and integrations (REST, JDBC, LDAP) allow automation as data grows. • Runs on the ServiceNow cloud platform, so it scales with organisational demand without new infrastructure.
